GENERAL SHIPPING DIRECTIONS.

EXPRESS—Is always the safest, quickest and best method of sending packages, and usually costs 25 to 35 cents each way for small packages. Instruct us how to ship.

CHEAP EXPRESS—Packages containing no jewelry or watches can be sent prepaid at a cost of one cent per ounce, but no charge less than 15 cents. Called ounce express. Instruct us how to ship.

INSURED SEALED MAIL—Is the next best method, insuring safety and reasonable dispatch. Rates of postage, two cents per avoirdupois ounce. Rates of insurance, five cents for each five dollars not to exceed $10.00. Instruct us how to ship.

SEALED MAIL—Is the next best method, insuring reasonable dispatch but not safety. Rates, two cents per avoirdupois ounce or fraction, to four pounds. Instruct us how to ship.

REGISTERED SEALED MAIL—Is the safest method by mail, though no responsibility attaches to the government in case of loss. Registered packages usually reach destination a day later than other sealed mail. Rates of postage, two cents each avoirdupois ounce or fraction thereof to four pounds. Registering eight cents additional. Instruct us how to ship.

UNSEALED MAIL—Is slow (sealed mail receiving preference of transmission), no writing but numbers or marks on each article to distinguish one from another, and the name and address of receiver and the name and address of the sender is allowed, thus requiring a separate letter for explanation. Postage, one cent per avoirdupois ounce or fraction thereof to four pounds. Unsealed packages may be registered. Instruct us how to ship.

It is of almost daily occurrence that orders are received from jewelers who are unknown to us and to the credit agencies. If you are new in business or not well established in your locality, send references with first order, or instruct us to send C. O. D. to insure promptness. If C. O. D. send with order enough to cover express charges both ways, which will be deducted from the bill.

GRAVERS.

The numbers on illustrations of lining gravers show the density of lines to given space, No. 8 being the finest, No. 24 the coarsest lines. When ordering, designate the grade of lines in accordance with the upper numbers, stating the number of lines desired. The illustrations show 8 and 10 lines, respectively, as marked. We carry them in stock, however, from 2 to 10 lines.

L

LAMPS.

The Perfection Student Lamp gives the most brilliant and steadiest light of any student lamp made; therefore they are particularly adapted to jeweler's and watch repairer's use.

The close application requires a steady light to avoid serious injury to the eyes, and no lamp meets this requirement as well as the "Perfection."

It is also the heaviest, best made and finished of its kind and in the long run, the cheapest.

No. 3101. Perfection Student Lamp, single burner and special concentrate metal reflector; 33 candle-power, price complete.... .... $3.50

No. 3102. Yale Central Draft Table Lamp, 75 candle-power. This lamp, while not so steady as the Perfection Student Lamp, is the most reliable of the many so-called "central draft" lamps on the market and gives a brilliant, white light of 75 candle-power. It has all up-to-date improvements, such as a simple wicking device, ratchet wick regulator and mechanism for lighting without taking off chimney or shade. It is made of heavy, embossed brass, finely polished and nickel-plated and has a well weighted base so it is not easily upset. Price, complete....$2.25

" 3103. Perfection Student Lamp, single burner, with glass reflector, price complete 3.00

" 3104. Perfection Student Lamp, double burner, with glass reflector, 66 candle-power, price complete 7.00

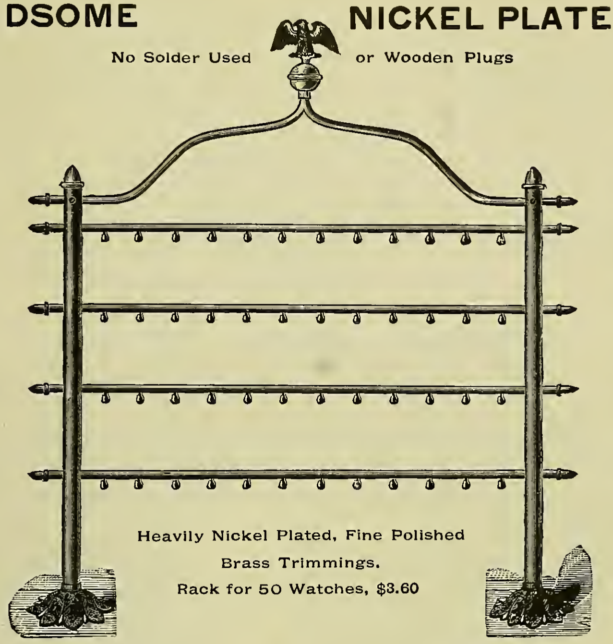
HANDSOME NICKEL PLATED RACKS

No Solder Used or Wooden Plugs

Everyone Warranted

TO GIVE SATISFACTION

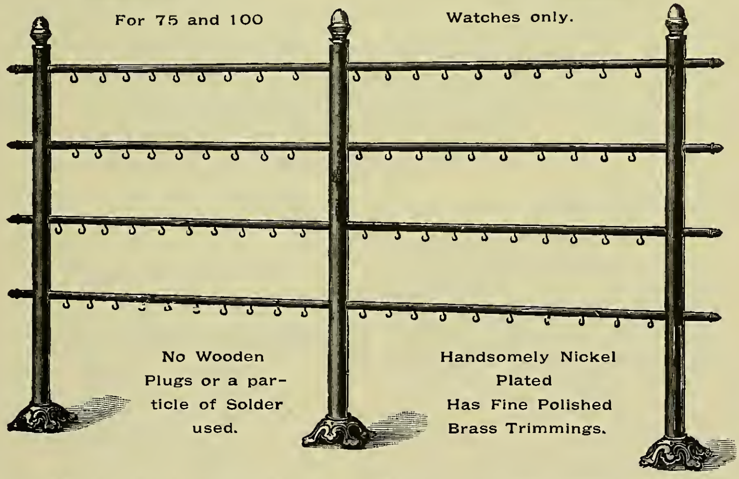


Heavily Nickel Plated, Fine Polished Brass Trimmings.

Rack for 50 Watches, $3.60

The Rack for 40 Watches is made like Rack for 50 Watches, but has no Eagle or bow. Price $2.80.

For 75 and 100 Watches only.



No Wooden Plugs or a particle of Solder used.

Handsomely Nickel Plated Has Fine Polished Brass Trimmings.

Rack for 75 Watches, 4 Cross Bars, $6.00 Rack for 100 Watches, 5 Cross Bars, $7.25

This Rack has great advantages over other and previous makes. It has three uprights or standards in place of two made formerly, which gives it a firmness in center of Rack so that the rods on which the watches hang **cannot possibly** g or bend downwards when hung full of watches, as the old style does. The Acorns on ends of cross bars and on top of ındards cannot become loose or shake off. The cross bars have a slot running the entire length in which slip the watch hooks, thus giving them a spring fit not otherwise obtained. The Rack for 100 watches is made like this ly it has five cross bars.

GROUT'S NEW RAILROAD WATCH SIGN

WITH ENGINE ATTACHED.

Swell Metal Dials. **Finished with the Best XXX Gold Leaf.**

" 36 " " " " " " 49 " "	48.00

The Watch and Engine are made of the Best Iron, and both are carved in the most artistic manner, as shown in this illustration—in bas-relief, or raised and sunk carving—so the wheels and truck, cow-catcher and the entire Engine show out "boldly." There is no black paint or hand shading on the Engine at all, but all the outlines and angles of the Engine are brought out sharply by simply carving and gilding with gold leaf.

Price, $6.50.

J. H. P. MAINSPRINGS

It is generally known, but not always realized, that a name will not make a poor mainspring a good one.

A GOOD NAME AND A GOOD MAINSPRING SHOULD BE SYNONYMOUS.

We take pride in and we are quite sensitive of our mainspring reputation, which reaches back into the early history of the Chicago material business.

J. H. P. Mainsprings
$1.25 per doz.
$14.00 per gross.
With Cabinet, as illustrated below,
$15.00.

Our Brand, J. H. P., means the best mainsprings that can be obtained for $1.25 per doz. or $14.00 per gross.

For watches requiring a perfect rating, we have the

J. H. P. Special
at $2.25 per doz. or
$24.00 per gross.

Of uniform even temper. The finest spring known.

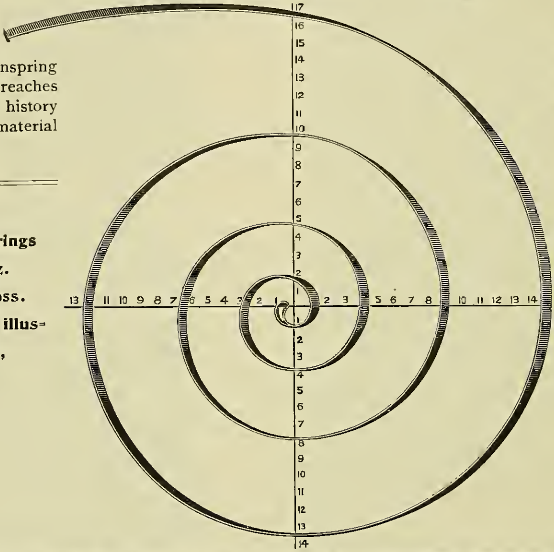

Diagram showing the uniform temper of the J. H. P. Mainspring, illustrating the correct receding curvilinearity after winding.

Illustrating the J. H. P. Mainspring Cabinet showing the easy method of removing boxes.

Each drawer contains eight boxes large enough to hold 1½ to 2 dozen mainsprings each. Springs can be easily removed and replaced in boxes.

* * *

Our Dollar Brand Main Spring

The best that can be procured for $1.00 per doz., or $10.50 per gross.

* * *

Our 75 Cent Brand Main Spring

Is the equal of any in its class and as good as many sold at a higher price. 75c per doz., $7.75 per gross.

The measurements for the table on following page were taken from the mainsprings manufactured by the respective watch companies. There being no process of manufacture making springs of absolute uniform measurement, every manufacturer allows for a variation of .0001 to .0002 inches in thickness and from .001 to .002 in width, which variation will not materially affect the force of a spring and its performance in the barrel.

Styles of fastenings indicated by letter in following table. Watches using style D are out of market. Style F takes the place of any single brace spring.

Style C.

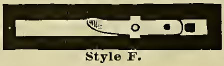
Style E.

Style H. T fastening same as Style C, but reversed.

Style X.

Indicates a plain spring with hole in end, not necessarily same as cut.

Style D.



Style F.

TO AVOID MISTAKES AND DELAYS WHEN ORDERING DIALS, THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

ORDERS FOR DIALS SHOULD BE ACCOMPANIED BY SAMPLES.

WHEN ORDERING A DIAL WITHOUT SAMPLE, IT IS BEST TO SUBMIT A DRAWING OF LETTERING REQUIRED, TOGETHER WITH AN IMPRESSION ON PAPER OF EXACT POSITION OF FOURTH PINION AND FEET; ALSO THE SIZE OF THE LOWER PLATE.

REGULAR DIALS WITH RED MARGINAL FIGURES SUPPLIED WITHOUT EXTRA CHARGE.

AS MOST DIALS ARE MADE IN HARD AND GLASS ENAMEL, ORDERS SHOULD SPECIFY THE QUALITY DESIRED.

IT IS IMPORTANT TO KNOW IF YOU WISH ROMAN OR ARABIC FIGURES.

GIVE THE NAME, SIZE AND NUMBER OF MOVEMENT TO BE FITTED; ALSO STATE WHETHER FOR HUNTING, OPEN FACE, **FULL** OPEN FACE OR SKYLIGHT MOVEMENT.

*SKYLIGHT AND **FULL** OPEN FACE DIALS HAVE NO SECONDS BITS, AND THEIR USE IS CONFINED LARGELY TO LADIES' HUNTING MOVEMENTS IN SKYLIGHT AND OPEN FACE CASES.

EXTRA CHARGE IS MADE FOR SOCIETY, EMBLEMATICAL AND SPECIAL LETTERED DIALS, AND FOR MATCHING FANCY DECORATED PATTERNS. ABOUT FOUR WEEKS' TIME IS REQUIRED FOR THE EXECUTION OF SUCH ORDERS.

NIGHT CLOCK DIALS.

	Net Price per Doz.
Porcelain Night Clock Dials, 4¾ inches in Diameter, made in Blue and Black, Roman and Arabic Figures	$18 00

ORDERS FOR NIGHT CLOCK DIALS SHOULD SPECIFY THE PARTICULAR STYLE OF LETTERING AND COLOR DESIRED.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS, OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN ABOVE COLUMNS.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 992,501.

THE LAST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 3,185,000.

SPECIAL NOTES.

The Fourth (4th) Wheels of Slow Train Movements contain 63 Teeth.

The Fourth (4th) Wheels of Quick Train Movements contain 70 Teeth.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS, OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN ABOVE COLUMNS.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 992,501.

THE LAST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 3,185,000.

SPECIAL NOTES.

The Fourth (4th) Wheels of Slow Train movements contain 63 Teeth.

The Fourth (4th) Wheels of Quick Train Movements contain 70 Teeth.

AMERICAN WALTHAM WATCH CO.'S MATERIALS.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL, THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN COLUMNS ON THE FOLLOWING PAGES.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED, TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED 2,354,001.

SPECIAL NOTE.

A distinguishing feature of the above Models (Series F and G), is the Stamping between the Plates of the Dates under which Letters Patent were granted, viz.: July 3d, 1883, and March 18th, 1884.

AMERICAN WALTHAM WATCH CO.'S MATERIALS.

SERIES F AND G (MODELS OF 1883.)

18 SIZE FULL PLATE OPEN FACE STEM WINDING PENDANT AND LEVER SETTING; ALSO KEY WINDING: AND HUNTING STEM WINDING LEVER SETTING.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL, THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN COLUMNS ON THE PRECEDING PAGES.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED, TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED **2,354,001.**

SPECIAL NOTE.

A distinguishing feature of the above Models (Series F and G), is the Stamping between the Plates of the Dates under which Letters Patent were granted, viz.: July 3d, 1883, and March 18th 1884

AMERICAN WALTHAM WATCH CO.'S MATERIALS.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS, OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN COLUMNS ON THE FOLLOWING PAGES.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED, TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 721,501.

SPECIAL NOTES.

COARSE TRAIN:—Series K, 14 Size 3/4 Plate Movements, named Hillside, with 72 Teeth in the Center Wheels, are COARSE TRAIN. All other 14 Size 3/4 Plate Movements are FINE TRAIN.

THIN TOP PLATES:—Series K, L, M and N, 14 Size 3/4 Plate, Hillside, Riverside and Amn. Grade Movements, numbered 2,365,001 and lower, were made with THIN TOP PLATES, hence Barrel Arbors and Pinions are shorter.

THICK TOP PLATES:—Series O, 14 Size 3/4 Plate, Bond Street, Hillside, Riverside and Amn. Grade Movements of a higher number than 2,365,001, are made with THICK TOP PLATES, hence Barrel Arbors and Pinions are longer.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN ABOVE COLUMNS.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED, TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED 721,501.

THE LAST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED 8,904,900.

SPECIAL NOTES.

COARSE TRAIN:—Series K, 14 Size 3/4 Plate Movements, named Hillside, with 72 Teeth in the Center Wheels, are COARSE TRAIN. All other 14 Size 3/4 Plate Movements are FINE TRAIN.

THIN TOP PLATES.—Series K, L, M and N, 14 Size 3/4 Plate, Hillside, Riverside and Amn. Grade Movements, numbered 2,365,001 and lower, were made with THIN TOP PLATES, hence Barrel Arbors and Pinions are shorter.

THICK TOP PLATES:—Series O, 14 Size 3/4 Plate, Bond Street, Hillside, Riverside and Amn. Grade Movements of a higher number than 2,365,001, are made with THICK TOP PLATES, hence Barrel Arbors and Pinions are longer.

Most of the Chronograph, Minute Register and Split Second Material illustrated, and many special parts not shown, requ're fitting; and when wanted it will be necessary to forward the complete Watch to enable such Parts to be made and fitted to order.

AMERICAN WALTHAM WATCH CO.'S MATERIALS.

SERIES K, L, M, N, O AND P, (MODELS OF 1874 and 1884.)

14 SIZE 3/4 PLATE HUNTING AND OPEN FACE STEM WINDING LEVER AND PENDANT SETTING; ALSO CHRONOGRAPH, MINUTE REGISTER AND SPLIT SECOND.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN COLUMNS ON THE PRECEDING PAGE.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED, TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED 721,501.

THE LAST MOVEMENT MADE IN ABOVE SERIES IS NUMBERED 8,904,900.

SPECIAL NOTES.

COARSE TRAIN:—Series K, 14 Size 3/4 Plate Movements, named Hillside, with 72 Teeth in the Center Wheels, are COARSE TRAIN. All other 14 Size 3/4 Plate Movements are FINE TRAIN.

THIN TOP PLATES:—Series K, L, M and N, 14 Size 3/4 Plate, Hillside, Riverside and Amn. Grade Movements, numbered 2,365,001 and lower, were made with THIN TOP PLATES, hence Barrel Arbors and Pinions are shorter.

THICK TOP PLATES:—Series O, 14 Size 3/4 Plate, Bond Street, Hillside, Riverside and Amn. Grade Movements of a higher number than 2,365,001, are made with THICK TOP PLATES, hence Barrel Arbors and Pinions are longer.

Most of the Chronograph, Minute Register and Split Second Material illustrated, and many special parts not shown, require fitting and when wanted it will be necessary to forward the complete Watch to enable such Parts to be made and fitted to order.

AMERICAN WALTHAM WATCH CO.'S MATERIALS.

SERIES K, L, M, N, O AND P, (MODELS OF 1874 and 1884.)

14 SIZE 3/4 PLATE HUNTING AND OPEN FACE STEM WINDING LEVER AND PENDANT SETTING; ALSO CHRONOGRAPH, MINUTE REGISTER AND SPLIT SECOND.

TO AVOID MISTAKES, WHEN ORDERING MATERIAL THE FOLLOWING DIRECTIONS SHOULD BE OBSERVED:

GIVE CATALOGUE NUMBER OF EACH PART WANTED.

GIVE NAME OR GRADE OF MOVEMENT.

COMPARE NUMBER OF LEAVES IN PINIONS AND NUMBER OF TEETH IN WHEELS, OF MATERIAL TO BE DUPLICATED, WITH THE DESCRIPTION IN ABOVE COLUMNS.

EXTRA CHARGE IS MADE FOR FITTING MATERIAL.

WHEN IN DOUBT AS TO THE MATERIAL WANTED, PLEASE ACCOMPANY ORDER WITH THE SAMPLE PART TO BE DUPLICATED.

WHEN A NEW PLATE, BRIDGE, OR COCK IS WANTED, THE REMAINING PARTS OF THE MOVEMENT SHOULD BE FORWARDED TO INSURE PERFECT FITTING.

THE FIRST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 691,001.

THE LAST MOVEMENT MADE IN ABOVE MODEL IS NUMBERED 5,079,500.

SPECIAL NOTES.

Please observe that 8 and 6 Size Wm. Ellery and Royal Key and Stem Wind Movements numbered 2,041,501 and below were made Coarse Train. All 8 and 6 Size Wm. Ellery and Royal Movements of a higher number than 2,041,501 are Fine Train

To avoid mistakes, when ordering material, the following directions should be carefully observed:
Give Catalogue Number of Part wanted;
Give Name of Movement;
Give Number of Movement;

Where prices are omitted, the material described is not made in that grade.

An extra charge will be made for fitting Parts and Material.

When a new Plate (Top or Pillar) or Balance Cock is wanted, the remaining parts of the Watch must be forwarded for proper fitting.

SPECIAL NOTE.—Please observe that all 1 Size, Lever Setting, 1st Series Movements are numbered below 2,000,000.

To avoid mistakes, when ordering material, the following directions should be carefully observed :

Give Catalogue Number of Part wanted ;
Give Name of Movement ;
Give Number of Movement.

Compare Number of Leaves in Pinions and Number of Teeth in Wheels of material to be replaced with those above.

Where prices are omitted, the material described is not made in that grade.

An extra charge will be made for fitting Parts and Material.

SPECIAL NOTE.—Please observe that all 1 Size Lever Setting, 1st Series Movements are numbered below 2,000,000.

The irregularity of measurements of the old Columbus material necessitates a sample of the part of which a duplicate is desired.

This is especially true of

BALANCE STAFFS,
ESCAPE WHEELS,
PALLETS,
SETTING LEVERS,
CENTER STAFFS,
CENTER JEWELS and all
TRAIN PINIONS.

In Ordering

Bevel Pinions, state whether for Pendant or Lever set.

Minute Wheels, whether old or new style. The old style has pin on under side.

Shifting Bar No. 79 is now replaced with one on another form.

Dust Bands, state if for hunting or open face.

When ordering a new Barrel, the Barrel Arbor for same should be sent, that we may properly fit Barrel to Arbor.

Observe that 18 size, Hunting Movements are made both Quick Train, with 78 teeth, and Slow Train, with 60 teeth in Barrel, and in order that there may be no mistake, care should be taken and compare number of teeth in Barrel to be replaced with the number given in Catalogue.

To ascertain Grade of Movement, consult INDEX. In ordering Material, give Number of Illustration and Class, or Number of Movement for which same is required.

Orders for less than one-fourth dozen will be charged at single piece price.

Observe that 18 Size Hunting Movements are made both Quick Train, with 78 teeth, and Slow Train, with 60 Teeth, in Barrel, and in order that there be no mistake, care should be taken and compare number of teeth in Barrel to be replaced with number given in Catalogue; also, that several different styles of Barrel Arbors are used, and unless you are positive as to Grade of Movement for which Material is required, the old part should be sent, or the Number of Movement Given.

To ascertain Grade of Movement, consult INDEX. In ordering Material, give Number of Illustration and Class, or Number of Movement for which same is required.

.Orders for less than one-fourth dozen will be charged at single piece price.

When a Pallet is wanted for a particular Movement, in order to get it well matched, send the Escape Wheel.

*Two different forms of Pallets have been used in these Classes, the difference being the thickness of Jewel or Stone required; those taking thin ones being known as New Style. In filling orders, unless Old Style is mentioned, the New Style will be sent.

When a Pallet and Fork is wanted for a particular Movement, in order to get it well matched, send the Escape Wheel.

*Two different forms of Pallets have been used in these Classes, the difference being the thickness of Jewel or Stone required; those taking thin ones being known as New Style. In filling orders, unless Old Style is mentioned, the New Style will be sent.

*Two different forms of Bevel Pinions have been used in these Classes, and pains should be taken to compare part wanted with Illustrations before ordering.

Among the Movements Classed as 16 Size, First Series, several have been made 14 Size; and of the 6 Size, First and Second Series, several have been made 8 Size; therefore in ordering Bevel Pinions for same, be particular to state SIZE in addition to Number of Illustration and Class.

* When a Breguet Spring is wanted for a particular Movement, owing to the variation in weights of Balances, it is necessary, in order that a Spring of suitable strength be selected, that the Balance be sent. This does not necessarily apply to Flat Springs, although better results would be obtained, should the same instructions be followed. With Breguet Hair Springs, the price of Stud is included.

† For Steel Balance.

*Among the 18 Size Movements described as Second Series, several of them had a Setting Spring like illustration No. 32, instead of No. 44; therefore pains should be taken to compare part wanted with illustration before ordering.

†Two illustrations, Nos. 51 and 52 are shown as being used in 18 Size, Third Series Movements, but all orders will be filled with No. 52, it taking the place of No. 51.

Of the 18, 16 and 6 Size Balance Staffs, two different styles have been made, the difference being in the length. The New Style 18 and 16 Size are longer, and the 6 Size shorter than formerly. In ordering, state which style is wanted. Eighteen Size Balance Staffs now have longer hubs than originally, thus bringing the Roller nearer Fork, allowing the use of a shorter Jewel Pin, thereby reducing the liability of breakage.

*See Centre Pinions.

On Old Style Centre Staffs, the Centre Pinion is held in position with a Centre Pinion Nut. The New Style, the Centre Pinion is screwed on Staff.

In the 16 Size, 6th to 13th Series, Illustration No. 1.482, the Wheel Shoulder on Centre Staff is D shaped, and fits a corresponding hole in the Centre Wheel. The two pieces are held together by screwing on the Centre Pinion, between which, and the Wheel a thin steel Washer is placed. This style will be used in our entire present line of Movements. No change has been made in the Centre Pinion.

*Oval Arm.

Observe that 18 Size Movements are made both Quick and Slow Train.

In the 16 Size, 6th to 13th Series, Illustrations Nos. 1,487 and 1,567, the Staff hole in Centre Wheel is D shaped and fits a corresponding shoulder on Centre Staff. The two pieces are held together by screwing on the Centre Pinion, between which, and the Wheel a thin steel Washer is placed. This style will be used in our entire present line of Movements. No change has been made in the Centre Pinion,

ELGIN NATIONAL WATCH CO.

ASSORTED MATERIAL.

In making up the following Assortments of Material we have endeavored to select the kinds most used by the Watch Repairer. The material is put up in small brass boxes, labeled so that the piece required may be easily found. The small boxes are placed in a larger one, which is also labeled, showing the kind of material contained therein.

In Assorted Screws, the most prominent ones are finished according to the letter under which the price is quoted; there are, however, several other styles of finish included in assortment. As a rule, nearly all Screws used under the Dial are Flat Head, Blue.

Assortment Number.	Articles.	Contents.	Price.

All of these attachments are designed for Hunting Cases. If used in Open Face Cases, the figure III of the dial will come at the pendant instead of the figure XII. Attachment for Crescent Street Watch should be specially ordered, but the price is the same as for other full plate American watches. Each attachment is put up in a sealed package, with screws, tap and directions for fitting. Prices for fitting include cleaning movements and, when in case, filling key-holes in cap, straight pendant in exchange for old gold in round one and polishing case, but do not include repairs We guarantee Stem Winding Attachment only when fitted to the watch by us For prices when fitted in case, see page 457.

n this and following pages will be found illustrations of nearly all the styles of Swiss Springs that have been made and time to time in Swiss and Imitation American watches. Even with this assortment to select from, there will be sp for which are not illustrated or kept in stock. In such case, if they are not obtainable, they must be made to order, v from 50 cts. upward, according to style and amount of labor required to make them. Order springs by number. *D* *t the illustrations.*

J. H. P WATCH GLASSES.

All Watch Glasses are measured by one standard. Absolute uniformity of measurement is unknown, and would be impractical, because no absolute standard is adhered to in cutting bezels. The J. H. P. has no superior in the American market for pliability, transparency, finish of edges, or regularity of height and diameter.

Prices as low as those of any standard glass.

STEMS AND SLEEVES.

PENDANT SET SLEEVES AND BARS NOW IN USE.

The material on the following page is used in all Keystone cases made at the present time and is the standard for the future.

Material designated "E" is for all pendant set cases in which the pendant setting device is inserted in the pendant. That marked "W" is for 16 size. Waltham cases.

Opposite each cut the measurement in hundreths of inches is given.

We give below a diagram of each kind. Measurements should be made between points marked "A—A" on diagrams.

To match a broken part, first see, by comparison with the cuts of which kind it is (whether E or W) and then measure the length of stem between points marked "A A" on diagram of that kind below. The cut showing measurement obtained in this way, for case of size for which material is wanted will have the number that should be ordered: for instance, if a piece of material which it is desired to duplicate is of style "E" and measures 50 between points "A A" on diagram, order 155 "E" for 16 size. O F case; or 159 "E" for 12 or 6 size case.

Diagram for measuring B material.
Measure between points marked A A.

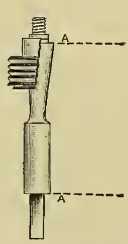

Diagram for measuring C material.
Measure between points marked A A.

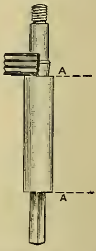

Diagram for measuring D material.
Measure between points marked A A.

DISCONTINUED PENDANT SET SLEEVES AND BARS.

The material on the following pages is no longer put into new cases, but is illustrated so that material in old cases can be duplicated.

There are three kinds (designated as B, C and D) and opposite each cut is given its measurement in hundreths of inches. As they have to be measured differently we show a diagram of each kind. Measurement should be made between points marked "A A" on diagram.

To match a broken part first see, by comparison with the cuts of which kind it is (whether B, C or D) and then measure the length of stem on old piece between points marked "A A" on the diagram of that kind (B, C or D) below. The cut showing measurement obtained in this way for case of the size for which material is wanted will have the number that should be ordered. For instance, if a piece of material which it is desired to duplicate is of style "B" and measures 39 between points "A A" on diagram, order 14 B for 6 size case; or 36 B for 0 size case.

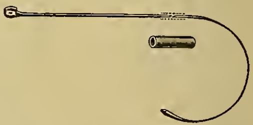
Gold and Silver Spectacle Temple Ferrules.

For Mending Riding Temples.



DIRECTIONS:—Taper the broken ends of Temples, as shown in cut, put on the ferrule and soft solder. They are assorted in three sizes to fit any size temple, are seamless, thin, and will make a neat and durable job. They can be used on temples made of gold, gold filled, steel and other metals, and will not take out the temper of temple, as hard soldering does. They can also be used as joints for watch cases, lockets, etc.

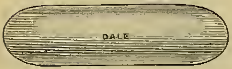
Easy Flowing Solder.

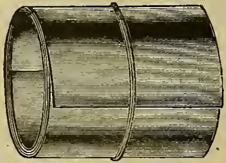
This solder flows at 155° of heat, or at less than boiling water. It is used with same flux as soft solder, and is most useful in Jewelry repairing or any place where heat is objectionable.



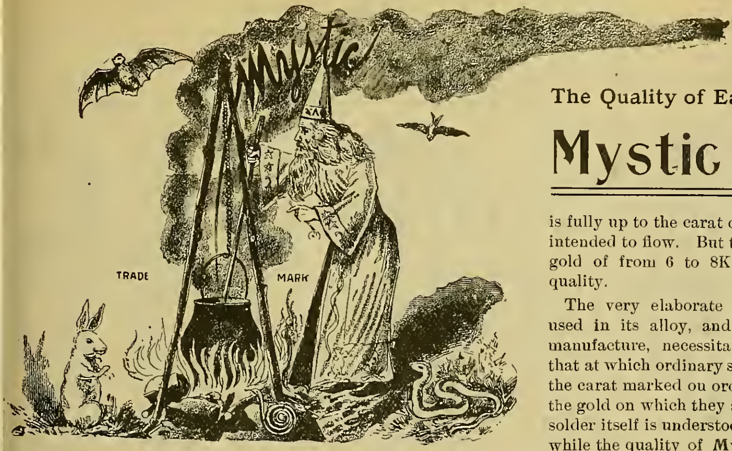
Exact Size, ½ oz.

No. 3454. Per oz., 50c

No. 3455. Per half oz., 30c



No. 3456. 1st Quality Silver Solder in rolls, per oz., $1.25



NO OTHER SOLDERS are like them. They compete with none. ☘ ☘ ☘

The Quality of Each Piece of

Mystic Solders

is fully up to the carat of the gold on which it is intended to flow. But they will melt and flow on gold of from 6 to 8K. lower than their own quality.

The very elaborate process, the rare metals used in its alloy, and the skill required in its manufacture, necessitates a price higher than that at which ordinary solders are sold. But since the carat marked on ordinary solders is that of the gold on which they are to be used, and the solder itself is understood to be 4K. or 5K. lower, while the quality of **Mystic Solders** is fully up to the carat marked, the difference is not so great as the price would seem to indicate.

But the cost of a piece of solder (not being over a cent on the average job) cannot be considered when the advantages of safety and superior workmanship are taken into account.

The **JOINT** made with **MYSTIC SOLDERS** will have the following characteristics:

t will be of the quality marked on the solder (not 3K. or 4K. lower).

t will not be easily melted again (another joint can be made near it without danger).

t will be tough and strong (the brittleness of the solder will not appear in the joint).

t can be made on any quality of gold with any quality of solder that matches the color.

Mystic Solders are fully guaranteed. If for any reason you are not satisfied with any of them return them.

MYSTIC SOLDERS ARE MADE IN THE FOLLOWING QUALITIES:

No. 1.	175° Solder (melts at about 175° F. Water boils at 212° F.) per oz.	20c
No. 2.	Pewter Solder, for mending pewter and Britannia ware, per oz.	15c
No. 3.	Soft Solder, absolutely non-tarnishable, will brush bright, per oz.	10c
No. 12.	No carat Solder, contains no gold, color of 6k gold, per dwt. -	25c
No. 21.	Silver Solder, very easy flowing and very strong, per oz. -	$2.00
	5 dwt. package - - - -	50c
No. 31.	8k. Solder, plump 8k, but will melt on about 4k. gold, per dwt.	80c
No. 32.	10k. Solder, plump 10k., but will melt on about 5k. gold, per dwt.	$1.00
No. 33.	14k. Solder, plump 14k., but will melt on about 6k. gold, per dwt.	$1.50
No. 34.	18k. Solder, plump 18k., but will melt on about 10k. gold, per dwt.	$1.65
No. 35.	22k. Solder, plump 22k., but will melt on about 12k. gold, per dwt.	$1.80

Combination package containing the following quantities of Mystic Solder $3.00
1 oz. each, Nos. 1, 2, 3. 1 dwt. each, Nos. 12, 21.
½ dwt. each, Nos. 31, 32, 33. ¼ dwt. each, Nos. 34, 35.

A Package of Mystic Solder contains sufficient flux to flow the entire piece.

All Mystic Gold Solders will flow on ordinary Solders of from two to six carat lower quality.

Tempered Staffing Steel.

This steel is of extra fine quality, and is specially drawn to fit Nos. 19, 21 and 23 wire chucks. We have a special process for hardening and tempering it, so as to get it very uniform and not injure it in the least. It is drawn to an exact staff temper, and is ready for use. Pieces are 1½ inches long and are sold in sets of 18 pieces, 6 of each size, Nos. 19, 21 and 23.

PRICE: $1.00 per set, or $1.00 per 18 pieces one size.

When ordering state shape desired.

To insure a perfect fit, always send Setting for which Stone is intended.

DOUBLETS.

A Doublet is a real stone in combination with a composition, the color of which combination determines the color of the stone. The intricacies in the manufacturing are such that a variety of grades is produced, and careful assorting necessary. We have, therefore, classified them accordingly.

JEWELERS' SUNDRIES – BOOKS.

PURCHASE AND SALES RECORD.

A comprehensive form for recording purchases and sales of watch movements and cases. To arrange any blank form whatever that will record the buying, selling or bartering of watch movements or cases, separate or together, has heretofore been but partially attained. All systems known to us have been carefully studied for years—all their good points are embodied in these forms. We believe this the most perfect record in use.

BEYOND No. 80 THE PRICES ARE SPECIAL.

PRICES OF ELLIPTIC, OVAL AND SQUARE BASE SHADES.

Oval Shades.—Add once the height, twice the large diameter, once the small diameter, and three inches over.
Square Shades.—Add once the height, twice the large diameter, once the small diameter, and five inches over.
When the height of a shade, round, oval or square, is less than the large diameter, it is counted as being of the same number of inches as said diameter.

JEWELRY WASH!
FOR CLEANING
DIAMOND, FOIL BACK,
And any kind of gold plated or gilt jewelry (acid color excepted.) Warranted not to contain any acid. For sale by all wholesale dealers in jewelry and material.
DIRECTIONS:—Put in a cup enough to cover the article to be cleaned, leave it in a half minute or longer; then rinse in warm water and dry in sawdust.
NOTE:—This solution is not poisonous, and will not injure the finest article, no matter how long they may be left in it. Keep the bottle corked when not in use.
After using the wash as per directions, pour it back into the bottle, as it can be used again with equal effectiveness.

VAN DYK'S
Silver-Plating
LIQUID
Is an excellent restorer for old plated ware, carriage lamps, harness trimmings, show case trimmings, etc.
It is the only reliable plating liquid in the market and will give satisfaction to everybody.
DIRECTIONS.—Have your surface to be plated clean, shake bottle well and apply liquid with a soft cloth on the surface till plate shows, by using it more times you will have a thicker plate, polish with a soft dry cloth or chamois skin

YOUNG'S
GOLD SOLUTION
For Plating.
VAN DYK'S
GOLD
SOLUTION
FOR PLATING.
OBSERVE DIRECTIONS CAREFULLY.
Clean the article to be plated well. Scrape the strips of Zinc with a knife and wind once, twice or oftener around the article to be plated, then pour into a porcelain or porcelain lined dish a quantity of the gold solution sufficient to cover the article to be plated and warm till steam arises, immerse the article to be plated, keeping it in motion all the time, remove and clean well with brush. If the desired color is not obtained try it once more and clean with alcohol and sawdust.
The solution may be used again next time but do not pour back into the original bottle.
Articles originally acid coated must be heated to redness, then placed in a pickle (Sulphuric Acid 1 part, Water 5 parts) allowing it to remain until blackness is removed. Clean well and it is ready for plating.

NOMENCLATURE OF WATCH PARTS.

The confusion of names for the same parts of watches has long been a source of annoyance to buyer and seller, and so forcibly has this been brought before the dealers that it has led to the compilation of this list of correct names. The highest authorities have been consulted, together with common sense and several years time in preparation and search. French and German horological scholars have been interested in the work, and so elaborate has been the research that the compilers feel sure of their claims A few examples will tend to show the importance of uniform names. A barrel is called a spring house (German), a drum and barrel; a balance arbor is called a staff; a spindle an axle, a shaft an arbor, etc. What watchmakers call a click is a ratchet (see dictionary). The word ratch (meaning ratchet wheel) did not appear in Webster's until placed there through information furnished by the compilers of this nomenclature. This is also true of several names of watch parts. No staff or roller exists in watches, a staff is ridged and a roller rolls, one is an arbor, the other a crank, etc. On account of electrotyped plates being furnished by the several watch companies it has been hardly possible to provide correct names in any catalogue. A piece of material performing the same office and called by different names by different watch companies may account for many errors in order filling. **This gives you the first opportunity offered toward uniform names. If you consider them of value use them in ordering, and they will be adopted in future catalogues.**

Abraidant—Any grinding or cutting powder as carborundum, emery, etc.

Acceleration—The increase in rate by regular minute increment. Noticed in ship chronometers and other fine instruments.

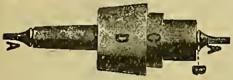
Ad-dendum—See Wheels.

Adjusting—The art of adjusting time pieces to prevent variations of rate, which would otherwise be caused by varying temperatures or positions.

Ana-lemma—An obsolete form of sun dial.

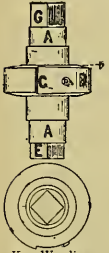
Annealing—The process of softening metals by heat. This must not be confounded with tempering, which is a partial softening.

Arbor—The elongated piece at the center of motion which supports a wheel or pinion or other object having a rotary or oscillating motion. It may be supported in bearings as a balance arbor, or it may itself be the bearing as the barrel arbor. Where some portion of an arbor performs seemingly a more important office, then, while it is an arbor, it is more prominently a pinion or cylinder, and is rightly called a pinion, cylinder, verge, or whatever most pronounced feature it possesses. Syn.—axle, shaft, journal.

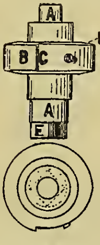


Balance Arbor.
A—Conical pivot. B—Oil groove. C—Balance Support. D—Nave.

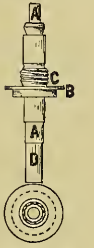
Arbor, Balance—The part passing through the center of the balance supporting the balance at the pivots. See Staff.



Key Winding Barrel Arbor.



Stem Winding Barrel Arbor.
A—Journal or pivot. B—Nave. C—Recess. D—Mainspring hook. E—Ratchet wheel square. F—Chamfer. G—Winding square.



Center Arbor.
A—Pivot. B—Nave. C—Pinion Screw. D—Canon pinion spindle.

Arbor Barrel—The supporting arbor of the mainspring barrel. In key winding watches these are sometimes correctly called winding arbors.

Arbor Center—The central arbor of the watch to which the center or second wheel is attached in watches with detachable center pinions. It carries the minute hand and the change gear for the hour hand. See also Setting Pin. Common name—Center Staff.

Arbor Cylinder—See Cylinder. The cylinder of the cylinder escapement is an arbor; it is also a cylinder, and the cylinder being the most prominent feature, should be known as such.

Arbor Duplex Balance—The balance arbor of the duplex escapement.

Arbor, Fuzee—The supporting arbor of the fuzee. Used in chronometers, Old English and Verge watches. See Fuzee.

Pallet Arbor.

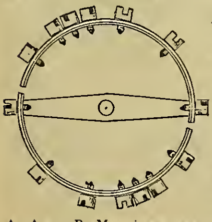
Arbor Pallet—The supporting arbor for the pallets. Common name Pallet Staff.

Arbor, Sweep Second—The arbor to which the sweep second hand is attached.

Sweep Second Arbor.

Arbor Verge—See Verge.

Arbor Winding—The arbor to which power is applied to wind the watch. See also Stem. In key winding watches the barrel arbor has a square extension and performs the office of winding arbor.

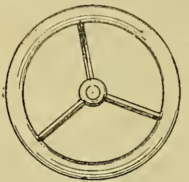


A—Arm. B—Meantime screws. C—Balance screws. D—Timing screws.

Balance—In modern watches a wheel balance is used. Arms only, have been and may be used, yet it is always a balance. Therefore, balance is amply explanatory as a general rule.

Balance, Compensating—When a balance is constructed to compensate for the undesirable results of varying temperature, it is properly called a compensating balance. The fact that all compensating balances depend, for their action, upon the difference in the rate of expansion of the component metals, has led to the meaningless name—expansion balance. (All balances expand.) Compensating balances are often called chronometer balances, because they were first used in ship chronometers, but as this character of balance is used indifferently on all kinds of watches, this name is not sufficiently distinguishing. Compensating balance, therefore, is the better term. When they do not compensate, and are made in imitation of a compensating balance, they are imitation compensating balances.

Dust Band.



Plain Balance.

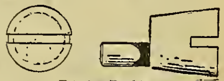
Dust Band.

Balance, Plain—A simple balance having no compensating feature.

Bands, Dust—A band that surrounds a movement between the plates to exclude dust, composed of one or more pieces.

Bankings—The part against which a lever fork or pin in the balance strikes to prevent overbanking. Banking is a coined word, from bank, converting a verb into a noun with the same show of authority as the words bearings, bushings, etc.

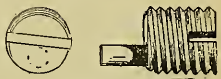
Bankings, Friction—Held in place by friction. Made eccentric to adapt the banking to the escaping.



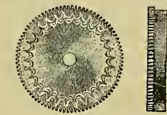
Friction Banking.

Bankings, Pin—A simple pin used in old English watches.

Bankings, Screw—The head is threaded to hold the banking firmly.



Screw Bankings.



Barrel.

Barrel—A barrel in horology is an enclosure for the mainspring; sometimes plain and sometimes toothed.

Bearings—A bearing is a part against which a pivot or journal moves or bears, as the bearing supporting the stem of a stem-winding watch. When it supports a non-moving part it is a stay or support. Where the moving part surrounds the bearing or stationary part, it is an inside bearing. Where the moving part is inside the bearing as the pivot, it is an outside bearing.

Beat—When the adjustment of an escapement is such that the escape wheel teeth strike the pallets evenly and uniformly, it is said to be in beat.

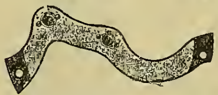
Bits—A second dial, made independently of the hour and minute dial but attached thereto, usually by soldering or cementing. The center of a double sunk dial is also a bit.

Boss—Any part that projects from a larger part for the purpose of receiving a moving part, is, in horology, a boss, as the boss on which the dial change wheel revolves or that on which the secondary stop is supported.

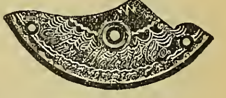
Bridges—In horology a bridge is a piece supported at each end, usually with screws and dowels. When supported at one end only and not used as a cap or potance, it is a cock. It is a potance only when supporting the lower end of a balance arbor. This rule will enable one to distinguish between bridges, caps, cocks and potances.

Balance Bridge.

Bridge, Balance—The bridge that holds the balance arbor in position, as in verge watches, where both ends are held by screws and dowels. Used on old style Trenton and some other watches.



Chronograph Wheel Bridge.



Barrel Bridge.

Bridge, Barrel—The bridge that supports the barrel arbor.

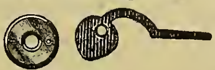
Bridge, Chronograph Wheel—The bridge that is set over the upper plate of the chronograph movement to hold the special recording train in position.

Cage—The frame of the watch, including the plates, pillars, cocks and bridges, together with the necessary screws when assembled.

Cams—Any portion of a moving part, shaped to give variable motion or direction to another part or to itself; in contact, is a cam. It may be by sliding or rolling contact.

Cam, Heart—Used on the sweep center arbor, chronographs and split second timing watches, to return the hand to its starting point.

Heart Cam.



Regulator Cam.

Cam, Regulator—Used to move the index of the regulator.

Caps—Caps and cups often perform the same office, the distinction being that a cup is cup shaped inside and deeply cut; while a cap is flat, or if concave, it is shallow.

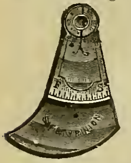
Chain, Fuzee—The chain that transmits motion from the barrel to the fuzee in watches having fuzee or repeating mechanism.

Chronograph—A recording time piece, arranged so that indefinite intervals of time may be recorded and observed at pleasure.

Chronoscope—A watch in which the time is indicated by moving discs or cylinders, presenting numbers to holes in an unfigured dial.

Clicks—See detents.

Cocks—A cock is a piece supported at one end only, usually with screws and dowels. Used as an extension to the plate for holding a bearing in cases where such bearing cannot be made in the plate itself, as a balance cock. According to this rule the potance is a cock, but as the name Potance is well established and bears very good authority by virtue of its shape (the cross potant of heraldry, the Cross of Jerusalem), it may be well to call it such. A bridge is supported always at both ends.



Balance Cock.

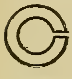
Cock, Balance—The piece hat holds the bearing for the balance arbor, when supported at one end only. When supported at both ends it is a Bridge.

Cock, Pallet—The supporting cock of the pallet arbor

Pallet Cock.

Cock, Split Second—The piece that holds the bearing for the sweep second arbor.

Cock, Train—A cock used on sectional plate movements to support a part of the train. When closer description is necessary prefix the name of part supported, as third wheel cock, etc.



Collet.

Collets—A collet is a collar usually circular, and usually loose or only friction tight.

Collet, Balance Spring—A collet that joins the balance spring to the balance arbor.

Collet, Stop—A collet that holds the primary or male stop in position on the Elgin barrel arbor.

Countersink—A depression followed by a depression or hole, as a depression for a screw-head followed by a screw hole, is a countersink. A single depression is a recess.

Cremallere—See Rack.

Chronometer—Any time piece. See Escapement.

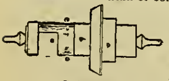
Clutch—Any devise to engage and disengage moving parts as those in line of shafting, etc. In horology that part that connects and disconnects the winding stem with the winding mechanism. (Do not confound a clutch with intermediate wheels).

Modern Swiss and American Impulse Crank.

English Impulse Crank.

Crank, Impulse—A crank is almost unknown in horology. The part receiving its power from the lever has, in horology, been called a table, because of its flat surface, notwithstanding that they are not always flat. Because of the niche in the edge and various shapes, as in certain English watches, they are not discs. As it in no action rolls, it is not a roller as often called. Regardless of its shape, it always performs the office of a crank. The fact that it is usually round for the purpose of providing against overbanking, and possibly some advantage in poising, it in no way affects its action as a crank. To define more closely, an impulse crank or balance crank we therefore submit to correct machine language and call it a crank, and for closer description an impulse crank.

Curb—To restrain or control. In horology the regulating device that controls the balance spring.

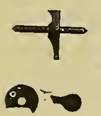


Cylinder.

Cylinder—Cylinder in horology is a hollow cylindrical balance arbor, as shown in illustration, for the double purpose of balance arbor and escapement.

Damaskeening—Decorations of metal by inlaying or etching designs on its surface. Rings and bars cut on plates for ornamentation is snailing or pearling.

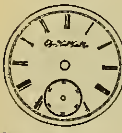
Demagnetizing—The act of destroying magnetic polarity.



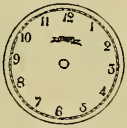
Various forms of detents.

Detent—The device that enters the interdental spaces of a ratchet wheel or rack, yielding to the direction or angle of the teeth while the ratchet wheel moves forward and resisting any backward motion. The common word click has been abandoned because it is merely a name for sound, and has no reference to a mechanical movement. When such a piece moves the wheel or rack it is called a pawl or pallet; a mechanical motion almost unknown in horology.

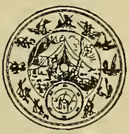
Dials—The graduated and numbered face of the watch. A plain dial is of plain surface without seconds or ornamentation. A dial with plain surface and seconds is a plain seconds dial. A dial with seconds dial depressed is a sunk seconds dial. A dial with its center depressed and the seconds dial still farther depressed is called a double sunk dial. A seconds dial made separate to set in a dial is a Bit. When a dial is solid the depressions are called depressed. When the depressed part is made separate and attached it is called sunk.



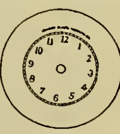
Sunk Seconds Dial.



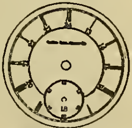
Plain Arabic Dial.



Ornamented Dial.



Skylight Dial.



Double Sunk Dial.

Dowels—A pin used to connect adjacent pieces penetrating part of its length into each piece at right angles to the plane of Junctions (Knight), as the dowels in balance cock.

Draw—The angle of the locking faces of the pallets of a lever escapement.

Escapement—The combination of watch parts which gives the impulse to the balance and restrains the movement of the train in relation thereto.

Escapement, Bascule—A chronometer escapement in which the detent turns on a pivot instead of being mounted on a spring as in the usual form.

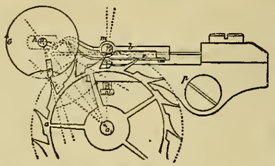


Fig. 32.

A—Escape Wheel. B—Detent. E—Detent Spring. G—Impulse Crank. H—Discharging Crank. M—Detent Jewel. V—Impulse Crank Jewel.

Escapement Chronometer—In this escapement the escape wheel is lock-d on a jeweled detent and impulse is given by the teeth of the escape wheel to a jewel on the impulse crank.

Escapement Cylinder—In this escapement the balance arbor is a hollow cylinder with nearly a half a side cut away. The bore of the cylinder and the ends of the escape wheel teeth are nearly the same size; while the space between the teeth and the outside diameter of the cylinder have nearly the same measurement. The impulse is given by the inclined plane of the escape wheel teeth on entering and leaving the cylinder. In order to provide suitable space for the complete swing of the balance, the teeth of the escape wheel are supported above the plane of the wheel by small posts, and opposite the plane of the wheel the sides of the cylinder are cut away so as to leave only enough material to support the balance with sufficient rigidity.

Fig. 33.

Plan of Cyliader with tooth in place.

A—Escape Wheel. B Cylinder. C—Entering lip of cylinder. D—Discharging lip of cylinder.

Escapement, Detached—In this form of escapement the balance is detached from the train during a portion of its vibration, as in the chronometer and lever escapement. See Lever Escapement.

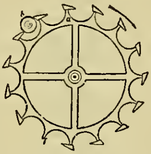

Fig. 35.

Cylinder Escape Wheel with cylinder in place.

A—Escape Wheel.
B—Cylinder.
F—Tooth removed to show post.

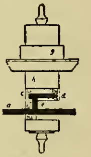

Fig. 34.

Elevation of Cylinder showing teeth in place. A—Escape Wheel. B—Cylinder. C—Entering lip of cylinder. D—Discharging lip of cylinder. E - Passage for escape wheel. G—Balance collect.

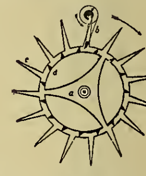

Fig. 36.

Duplex Escapement.

A—Escape Wheel.
B—Impulse Pallet.
C—Celent Teeth.
D—Impulse Teeth.
E—Duplex Escape Jewel.

Escapement, Duplex—As invented by LeRoy, there were two escape wheels to this escapement: one to give impulse to the balance; the other to check the movement of the train, hence the name. Duplex. Subsequently the two wheels were united in one, having two sets of teeth as shown in the illustration. As in the chronometer escapement, the impulse is given at alternate vibrations of the balance. With one or two notable exceptions this form of escapement is not now used. This escapement used in cheap, so-called Chinese Duplex Watches, is really a Triplex Escapement, having three sets of teeth.

Escapement, Frictional—An escapement which is never detached from the balance. As the Duplex, Cylinder and Verge Escapements.

Escapement, Lever—The Escapement generally used in modern watches. The impulse is given to the balance by means of pallets on a lever, acting on a pin in a crank on the balance arbor. There are several forms of this escapement, the principal one being the English lever as shown in Fig. 37 and the Straight Line as in Fig. 38. Some variations in the form of pallets and teeth of the escape wheel are also shown, Fig. 39 being the form generally used. Fig. 40 is a German form in which small, round pins are substituted for pallets.

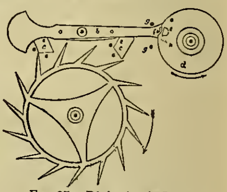

Fig. 37. Right Angle Lever.

A—Escape Wheel. B—Fork. 1C—Engaging Pallet. 2C—Discharging Pallet. 3 3—Locking Faces. 4 4—Impulse Faces. D—Crank. E—Crank Jewel. F Guard Pin. G G—Banking. H H — Prongs. I—Counter Weight.

Escapement, Single Beat—In this escapement the escape wheel moves only at alternate vibrations of the balance. The Chronometer and Duplex Escapements are examples.

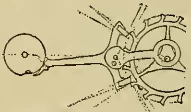

Fig. 38. Straight Line Lever.

Escapement, Verge—This is without doubt the oldest escapement. Fig. 41 shows the escapement as it lies in the watch. The plane of the escape wheel is at right angle to the plane of the balance. C and D are not on the same plane, but so disposed on the balance arbor that C coincides with the upper teeth on the crown escape wheel, while D is opposite the lower teeth, and are alternately moved forward and back by the revolutions of the wheel. It is a very inaccurate escapement and is not now used. It was formerly used in so-called Bull's Eye Watches, the mechanical "turnip" of years gone by.

Escapement, Vertical—One in which the arbors of the balance and escape wheel are at a right angle. A vertical escapement made with two escape wheels was a modification of the verge, now obsolete. Not illustrated.

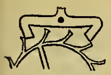

Fig. 39.

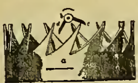

Fig. 41.
A—Escape Wheel.
B—Verge.
C—Upper Pallet.
D—Lower Pallet.

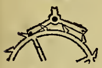

Fig. 40.

Forks—The part of the lever escapement that engages the crank jewel. When the pallets and fork are in one piece, as in some straight line escapements, the whole piece becomes a forked lever.

Frosting—The art of producing the gray frost-like surface on steel.

Fig. 42.
Forks for straight line lever.

Fig. 42.
Forks for right angle lever.

Fuzee—So called from its shape; from Latin Fusus (a spindle). A spirally grooved tapering piece on which is wound a chain, which transmits power to it from the mainspring barrel. Its office is to equalize the power of the spring by increasing the leverage as it unwinds. It is used in many English watches and chronometers, but American manufacturers consider its advantages offset by the balance varying with a varying power.

Fig. 43. Fuzee

Gear—See wheels.

Hand—The device that points to the characters on the dial to indicate the time. There seems to be no warrant for this name. Index is the proper name, but long usage compels the use of the word. Strictly speaking it should be called an index.

Hand, Hour—The hand that indicates the hour.

Hand, Minute—The hand that indicates the minute.

Hand, Minute—The hand that registers the minute in chronograph and split second watches.

Hand, Second—A hand which indicates the second.

Hand, Sweep Second—A second hand turning on an arbor at the center of the dial, pointing to figures on the dial margin.

The following engravings show a few of the principal styles of the great variety of hands that are made.

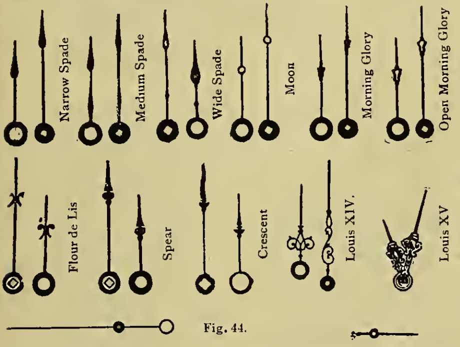

Fig. 44.

Sweep Second.

Second

Hooks, Barrel—The hook on the inside of the mainspring barrel to hold the spring in place.

Hooks, Fuzee Chain—The hooks on the end of the fuzee chain which connect it to the fuzee and barrel.

Index—Anything used to indicate, point out or guide, as the forefinger, the hands of a clock, the pointer of a pair of scales, or of an astronomical or physical instrument or the arms of a guide post. (Standard Dictionary.)

The figured scale on the regulating device of a watch has usually been called an index, but this is so manifestly an error that it must be ignored. Regulator scale is correct.

Index, Dial—See hands.

Index, Regulator—That part of the regulating device which points to the graduations on the scale. Usually the index is an integral part of the regulator, but in some instances the index is part of a cam or other device to move the regulator.

Jewel—In horological parlance, a jewel is a precious or semi-precious stone, shaped to form a bearing surface for pivots and other moving parts of the watch

In the case of jewels which form bearings for pivots or other parts, they take their name from the particular arbor and wheel or other part which they support; thus, fourth wheel pivot jewel, or fourth wheel jewel, escape wheel jewel, pallet jewel, etc.

Jewel, Balance—The drilled or hole jewel used as a bearing for the balance arbor pivot.

Fig. 45.

Balance Jewel in setting.

Balance and Cap Jewel in settings.

Balance Jewel.

The plain undrilled jewel used as a cap covering the hole in the drilled jewel is properly a balance jewel also, but to avoid confusion this is called a Cap Jewel.

Jewel, Cap—A plain, undrilled jewel on which the end of a pivot bears used usually to cap the balance, and escape jewels in fine watches.

Fig. 46.
Cap Jewel.

Jewel, Center—The jewel that forms the bearing for the center arbor or pinion.

Jewel, Crank—The pin made usually of garnet or ruby, set in the balance crank to engage with the lever and receive the impulse. Sometimes called Jewel Pin, or Pin Jewel; incorrectly called a Roller Jewel. (See Fig. 47.)

Jewel, Cock—The upper balance hole jewel set in the balance cock, as distinguished from the lower or foot jewel. See balance Jewel.

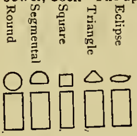

Fig. 47.
Various forms of Crank Jewels

Jewel, Detent—The jewel on which the teeth of the chronometer escape wheel impinge, and which detains the wheel till the swinging oscillation of the balance has unlocked it. Not Illustrated.

Jewel, Duplex Escape—The collar jewel on the balance arbor of the duplex escapement, having a slot, which permits the passage of the escape wheel teeth.

Jewel, Escape Wheel Pinion—The drilled jewel that forms the bearing for the escape wheel pinion.

Jewel, Foot or Potance—The lower drilled jewel supporting the balance arbor. See Balance Jewel.

Fig. 48.
Duplex Escape Jewel.

Jewel, Fuzee—The Jewel that supports the fuzee arbor.

Jewel, Pallet—The Jewel which forms either the receiving or leaving face of the pallet in the lever escapement

Fig. 49.
Pallet Jewel.

Jewel, Pallet Arbor—The drilled jewel that forms the bearing for the pallet arbor.

Jewel, Train—All the jewels in the watch which form bearings for the pinion pivots are called train jewels, as distinguished from those jewels which form bearings for the escapement pivots. Each train jewel is particularized by the wheel whose pinion it supports.

Fig. 50.
Train Jewel.

Lever—A mechanical device consisting of a rigid structure, often a slight bar, turning freely on a fixed point or fulcrum and serving to impart pressure or motion from a source of power to a resistance—Standard Dictionary.

Under this definition a great number of devices used to shift the power given to the crown from the winding to the setting mechanism of stem winding watches, are levers, but, as a large proportion of such devices are sliding mechanisms and have no claim to the term lever, and as all of them, be they levers or otherwise, perform the office of shipping or shifting a movable mechanism from engagement with one train of wheels to another, it is found expedient to name them all shippers, which see.

Lever, Impulse—The combination of pallet, fork and arbor constitutes the lever of the lever escapement.

Fig. 51.
Lever.

Fig. 52.
Regulator, Nut and Screw.

Nut, Center Pinion—A milled face nut screwed onto the center arbor to hold the pinion in place. Not Illustrated.

Nut, Regulator—An internally threaded milled nut turning on a bent screw used to operate the regulating device in some watches.

Pallet—That part of the lever escapement that engages with the escape wheel. Strictly the name pallet should be confined to the acting surfaces of the jewels, but for convenience, the word is applied to the jewels themselves and the metal frame by which they are attached to the fork.

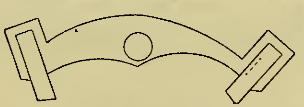

Fig. 53. Pallet.

Pillars—The posts which connect the plate of the watch.

Pin—A pin in mechanics is any straight piece, usually but not necessarily round, not used as an arbor, having its length much greater than its diameter.

Pin, Center—The pin usually at the center of the watch which carries the cannon pinion.

Fig. 54.
Pillar.

Fig. 55.
Center Pin.

Pin, Setting—The pin used to operate the shipper in stem winding watches. In some watches this is set in the side of the case, and is usually pushed in by the thumb nail. In some American pendant set watches it is a pin set in the winding arbor and is moved by pulling the crown.

Pinion—To distinguish between pinions and wheels is very difficult. In fact all pinions are wheels, though all wheels are not pinions. A pinion is usually a relatively small wheel attached to and turning on the same arbor with a larger one, and serves as a factor in a train of gearing for reducing or increasing speed. If, however, the train terminates in a relatively small wheel, having no other wheel on the same arbor, such a wheel is a pinion.

Pinions have necessarily a great thickness or length in proportion to their diameter. Because of their thinness in proportion to their length, the cogs of a pinion are called leaves.

Pinions in the watch are specfied by the wheel to which they are attached, except in the case of winding and cannon pinions.

In remote time, for want of a better one, the name cannon pinion was given to this piece because of the fancied resemblance to the old style piece of ordnance of this name.

Fig. 56.
Cannon Pinion.

Fig. 57
Center Pinion.

Pinion, Beveled—See winding pinion. A pinion having a beveled gear which transmits the power applied to stem winding train. A winding pinion.

Pinion, Cannon—A pinion attached by light friction to the center pin or center arbor. It carries the minute hand and transmits the action of the train to the change gear for the hour hand.

Pinion Center—The pinion attached to or a part of the center arbor, which receives power from the barrel. It carries the cannon pinion and center wheel.

Pinion, Escape—The pinion attached to the arbor of the escape wheel.

Fig. 58.
Escape Pinion

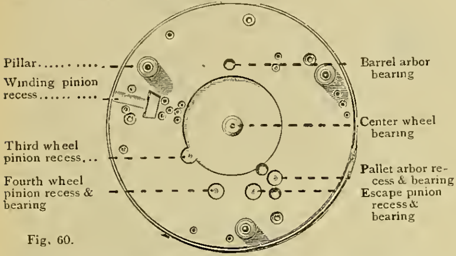
Pinion, Sweep Second—The pinion attached to the arbor carrying the sweep second hand.

Pinion, Winding—A pinion which transmits the power applied to the stem to the winding train. It sometimes has a beveled face, or its teeth may be cut either on its perifery as is usually done, or on its face like a contrate wheel.

Pivot—That part of an arbor which is supported by the bearings. A pivot and a journal are the same thing in fact, but the pivot is distinguished by being small and of greater length than diameter.

Fig. 59.
Various Forms of Winding Pinions.

Plates—The disc connected by the pillars which contain the jewels and other bearings and support the train of the watch.



Pillar
Winding pinion recess
Third wheel pinion recess
Fourth wheel pinion recess & bearing
Barrel arbor bearing
Center wheel bearing
Pallet arbor recess & bearing
Escape pinion recess & bearing

Fig. 60.

A depression or sunken place is a recess and should be prefixed by the name of the part which it accommodates, as center wheel recess, jewel recess, yoke recess, etc.

A depression followed by a depression or hole as a depession for a screw head followed by the screw hole is a countersink.

A projection to which a part is attached rigidly is a stud.

A projection on which a part is to revolve or oscillate is a boss. This supplies a rule for all the depession or projections on a watch plate.

Any part against which a moving part bears is a bearing, as a winding pinion bearing, etc.

A pivot hole is a bearing, but pivot holes are so seldom sold separately that it will be unnecessary to quote it.

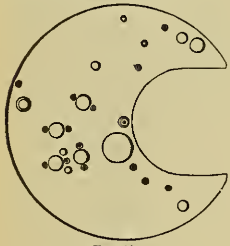


Fig. 61
Upper full plate.

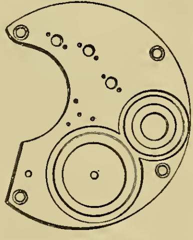

Fig. 62.
Upper partial or ¾ plate.

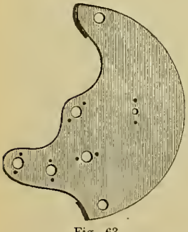

Fig. 63.
Upper partial plate.

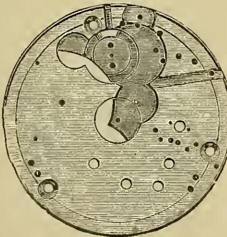

Fig. 64.
Lower or pillar partial or ¾ plate

Pillars—The posts that separate and support the plates in position

Fig. 65.

Potance—The lower support for the balance arbor. See cock.

Rack—A rack is a bar with teeth (usually straight) into which the teeth of a wheel mesh, either to drive or be driven.

Ratch—A wheel or bar or other shaped piece having teeth into which a ratchet falls.

Ratchet—A ratchet is what is commonly known as a click or Pillar. detent or pawl. If used to operate a wheel, such wheel is a ratchet wheel or ratch. If used to operate a bar it is a ratchet bar or a ratch. (See detent.)

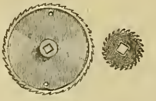

Fig. 66.
Ratchets.

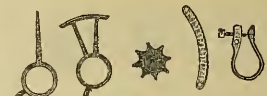

Fig. 67.
Plain regulator. Rack & pinion regulator Star wheel index. Regulator scale. Regulator spring.

Regulators—That part of the watch which carries the guard pins and by shortening or lengthening the effective part of the balance spring determines the period of oscillation.

Fig. 68.
Sleeve.

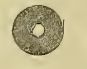

Fig. 69.
Balance Spring

Sleeves—A sleeve in mechanics is a hollow cylinder which operates over another cylindrically shaped support, as a pendant set sleeve.

Springs, Balance—Sometimes incorrectly called a hair spring. The spring which determines the rate of oscillation of the balance.

Springs, Detent—The spring which throws the detent forward into the teeth of the ratchet wheel or ratch.

Springs, Main—The spring which supplies the power to run the watch.

Fig. 71. Yoke Spring.

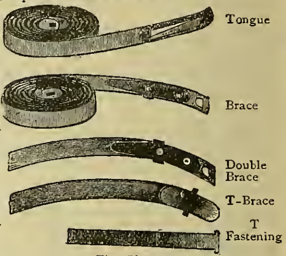

Fig. 70.

Spring, Yoke—A spring which holds the yoke in position.

Shipper—In machinery a shipper is a part that ships or shifts the position of another part.
In stem wind watches to shift the position of the yoke both a lever and slide are used. Shipper covers any device for this purpose. Note however, the distinction between a shipper and a cam. Are of various shapes and adaptation.

Screws—Each screw partakes of the name of the part it is intended to attach to or that the screw attaches to, or the work it is intended to perform. As case screw attaches the movement to the case, balance screw attaches to the balance, adjusting screw for adjustments, etc.

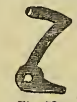

Fig. 73.
Shipper.

Fig. 72.
Detent Spring.

Fig. 74. Anulus stop. Secondary stop. Primary stop.

Stops—A device used to limit the number of revolutions of an arbor. In a watch used to prevent an overwinding of the mainspring.

Stems—The spindle shape device used to transmit motion from the crown to the watch mechanism through the pendant.

Studs—Any projection used to attach another part rigidly.

Washers—A ring placed between two parts to increase or relieve friction to fill space or for other uses.

WHEELS.

Fig. 75.
Balance spring stud.

Fig. 76.
Stem.

Adendum—That part of the tooth between the pitch circle and the crest of the tooth.

Clearance—When the smaller wheel or pinion has the interdental space wider than the tooth measured on the pitch circle) in order to allow free passage for the teeth of the wheel. The difference between the width of the tooth and space is called the clearance.

Face—That part of the surface of the tooth between the crest of the tooth and the pitch circle.

Flank—That part of the surface of the tooth between the bottom of the interdental space and the pitch circle.

Geometrical Radius—The radius of the pitch circle.

Interdental Space The space between the teeth.

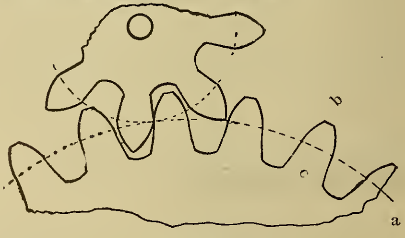

Fig. 76
Epicicloidal Gear
a—Pitch circle b—Crest of Teeth c—Base of teeth

Mesh or Mash—The depth of engagement of the teeth of one wheel between the teeth of another.

Pitch—The distance between the centers of adjacent teeth measured on the pitch circle

Pitch Circle—The circle of contact, the theorical or geometric circumference.

Real Radius—The distance from the center of the wheel to the crest of the teeth.

Wheels, Watch—The first wheel in the watch is the barrel.

The second wheel in the watch is the center wheel.

The third wheel in the watch is the wheel following the center wheel.

The fourth wheel in the watch is the second-hand wheel.

The fifth wheel in the watch is the escape wheel.

The dial wheels are the two wheels between the dial and the bottom plate.

The change wheel, incorrectly called the minute wheel, meshes into the cannon pinion, which revolves once in an hour, and the change pinion meshes into the hour wheel, which revolves once in twelve hours and carries the hour hand. There is no authority for calling this change wheel a minute wheel, it has nothing to do with a minute, it does not revolve once in a minute, nor a fraction of a minute, nor any definite multiple of a minute, and is used merely to change the period of revolution from the center arbor to the hour wheel. Fig. 78.

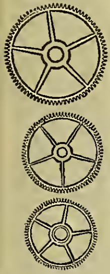

Fig. 77.

Fig. 78.

Wheel, Anulus—A wheel with a comparatively large hole in the center making it a ring. See Fig. 80.

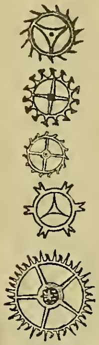
Wheel, Beveled—A wheel having its teeth at an angle other than a right angle or parallel to its plane.

Wheel, Contrate—A wheel having its teeth parallel to its plane.

Wheel, Crown—A wheel in form of a hollow cylinder having its teeth in its side, making it resemble a crown, as a verge escape wheel. The word is applied to many stem winding wheels sometimes correctly when they resemble a crown but usually those called crown are contrate wheels.

Wheel, Duplex—A wheel having two sets of teeth, as a duplex escape wheel.

Wheel, Ratchet—See Ratch.



Old English lever escape wheel
Cylinder escape wheel
Lever escape wheel
Chinese escape duplex wheel
Waterbury duplex escape wheel

Fig. 79.

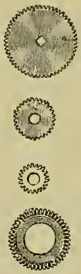


Fig. 80.

Wheel, Intermediate—A connecting wheel, the office of which is to transmit motion to a third or other wheel, too far removed to mesh with the driving wheel, or to change the direction of the third wheel. Sometimes called idle wheel. An intermediate setting wheel or intermediate winding wheel are called respectively intersetting and interwinding, or inter setting and inter winding.

Wheel, Setting—The wheel in a stem winding watch that engages with the setting device and is operated by the crown.

Wheel, Winding—The wheel which engages with the winding mechanism in stem-winding watches and is operated from the crown.

Yoke—A yoke is a bond which connects two or more parts that they may change their position relative to other parts without altering their position relative to each other.

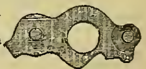

Fig. 81. Yoke.

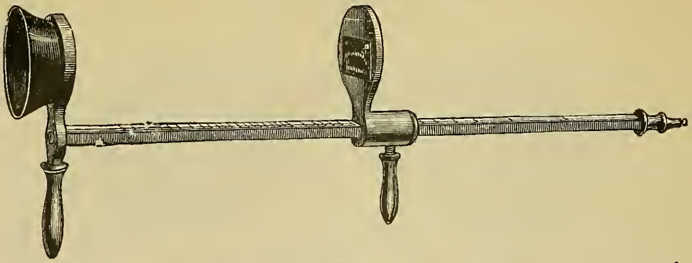
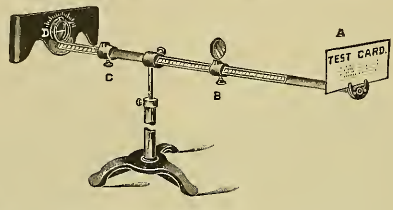
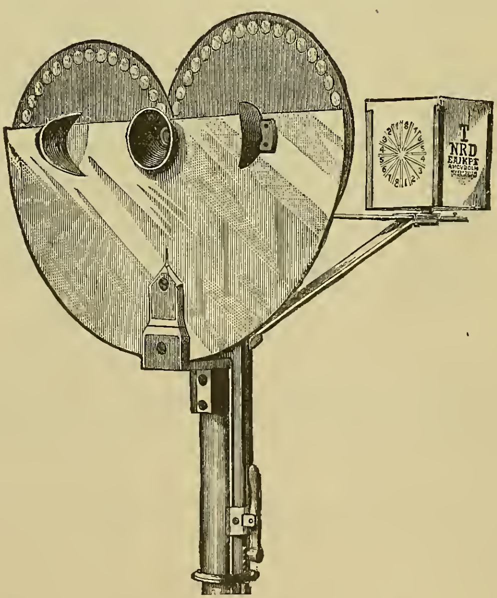
OPTOMETERS.



No. 148. Optometer, with Lens and Sliding Test-type on Graduated N. P. Bar and Astigmatic Testing Card, each...........$0.70
Ootometer, double, with Lens and Sliding Test-type on Graduated N. P. Bar and Astigmatic Testing Card, each... 1.05



No. 149. Fay's Improved Optometer—Has the following advantages:
First—It measures Myopia, Hypermetropia, Astigmatism and Presbyopia in such a way that mistakes are almost impossible.
Second—By giving the relaxing power of the ciliary muscle, the Optometer measures the total latent Hypermetropia without mydriatic.
Third—A great time saver. Test can be made in two minutes.
Fourth—It enables the operator to make the test with the retinoscope with but one or two changes of lenses.
Fifth—Price only..$12.00
The book "New Methods in the Science of Fitting Glasses" goes free with the Optometer, or will be sent, bound in paper cover, for.. .25



This instrument is now made with two round plates to cover the discs, not as shown in cut.

No. 151. Optometer, Simple, with Single Disc and Spherical Lenses, only, each..$40.00
" 152. Optometer, Compound, with Double Disc and Spherical and Cylindrical Lenses, each 95.00
Pamphlets describing above instruments sent upon application.

MURINE "2 Drop CURE"

EYE REMEDIES

Are used successfully by Physicians, Oculists, Opticians and the People. They are prepared under the direction of Eye Specialists and are *safe and reliable.*

Murine is of special value to the REFRACTING OPTICIAN, as it so rapidly reduces an Inflamed Eye to its normal condition, thereby rendering a correct measurement for glasses possible. No eye is too sensitive, and no case too complicated to be relieved by MURINE.

MURINE per bottle, by mail, **50c.** per dozen, full dozen only, **$3.50.**

	Wholesale.	Retail.
BANENE (for Cataracts and Floating Spots)	$0 75 each	$1 20
GRANULINE (for Chronic Cases)	90 "	1 50

HYDRONE (Used when glass eyes are worn and for mattery discharges)	70 "	1 10
OZONE INHALER OUTFIT (Catarrhal conditions)	1 00 "	1 50

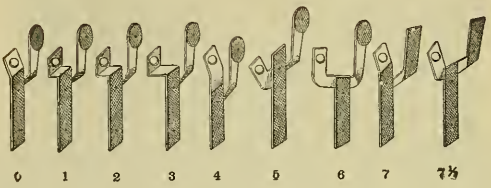
A Beautiful Show Case with a Silver Frame and Plate Glass FREE with first order of Four Dozen.

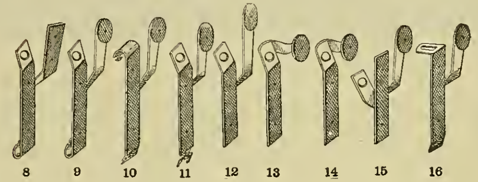
EVERY JEWELER AND OPTICIAN SHOULD CARRY MURINE. ITS RESULTS ARE ABSOLUTE.

MURINE cures all inflammations, granulations, and corrects defects caused by wearing a glass in bench work.
MURINE is packed in attractive form for your show case. We are agents for MURINE, you should carry it in stock.

The MURINE Book, "YOUR EYES," fully describes these preparations and gives many testimonials from leading Opticians and Jewelers **SEND FOR COPY.**

"ANCHOR" GUARDS.



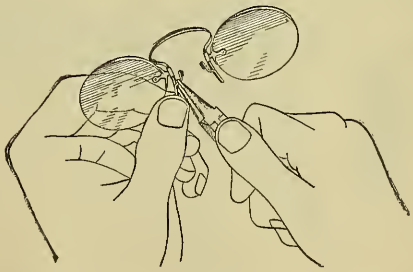


Order by Number. Designate Cork or Shell Blades. State if Gold, German Silver or Filled Gold is desired.

SUGGESTIONS.

For Distance—0 4 7 13 14
For Reading—8 9 10 11 12 16
For Long Eyelashes—5 6 7½ 15
For Wide Pupillary Distance—1 2 3
No. 4 sets glasses high; No. 12 sets glasses low.

The selection of guards to be used will depend, in each individual case, upon the anatomy of the nose.



The adjustment is so simple and perfect that the guard can be made to conform to the anatomy of any nose, and rest securely in position.
